

TIPS

How to make your computer run faster

01. Change power saving setting mode

- Go to Control Panel
- Select Hardware and Sound
- Under Power Options, select Change power-saving settings
- Check Automatically balances performances button

02. Disable programs that run on startup

- Press Ctrl_Shift_Esc or type “Task Manager” in search box and press Enter.
- Once Task Manager window appears, click on the Startup tab.
- Click on unnecessary application with the right mouse button and disable it.

03. Shut off Windows tips and tricks

- Click the Start button
- Scroll down and select Settings icon
- Select System, then Notifications & actions
- Uncheck the box marked “Get tips, tricks, and suggestions as you use Windows.”

04. Turn off Cortana

- Click Start, scroll down and right click on Cortana icon
- Select More, then App Settings
- Turn off each toggle from on to off

05. Perform Disk Cleanup

- In the search box on the taskbar, type disk cleanup, and select Disk Cleanup from the list of results.
- Select the drive you want to clean up, and then click OK.
- Also, in Disk Cleanup, select Clean up system files and click OK.

06. Shut down or restart your computer at least once a week

- When you leave your computer on, background programs and applications hog its memory. Shutting down or restarting your computer refreshes your memory and prompts important tools to run maintenance on it.
